Notes to the Band Plan

ITU-R radio regulation RR 1.152 and Recommendation SM.328 (extract):

Necessary bandwidth: For a given class of emission, the width of the frequency band which is just sufficient to ensure the transmission of information at the rate and with the quality required under specified conditions.

Foundation and Intermediate Licence holders are advised to check their licences for the permitted power limits and conditions applicable to their class of licence.

All Modes	CW, SSB and those modes listed as Centres of Activity, plus AM (Consideration should be given to adjacent channel users.
Image Modes	Any analogue or digital image modes within the appropriate bandwidth, for example SSTV and Fax
Narrow band modes	All modes using up to 500Hz bandwidth, including CW, RTTY, PSK, etc
Digimodes	Any digital mode used within the appropriate bandwidth, for example RTTY, PSK, MT63, etc
Sideband usage	Below 10MHz use lower sideband (LSB), above 10MHz use upper sideband (USB). Note the lowest dial settings for LSB Voice modes are 1843, 3603 and 7053kHz on 160, 80 and 40m. Note that on 5MHz USB is used.
Amplitude Modulation (AM)	Amplitude Modulation (AM) with a bandwidth greater than 2.7kHz is acceptable in the all-modes segments provided users consider adjacent channel activity when selecting operating frequencies (Davos 2005)
Extended SSB (eSSB)	Extended SSB (eSSB) is only acceptable in the all-modes segments provided users consider adjacent channel activity when selecting operating frequencies Users of Digital Voice (DV) should check that the channel is not in use by other modes (CT08_C5_Rec20).
Digital Voice (DV)	
FM Repeater & Gateway Access	CTCSS Access is recommended. Toneburst access is being withdrawn in line with IARU-R1 recommendations
Beacons	Propagation Beacon Sub-bands are highlighted - Please avoid transmitting in them!!
MGM	M(achine) G(enerated) M(ode) indicates those transmission modes relying fully on computer processing such as RTTY, AMTOR, PSK31, JTxx, FSK441 and the like. This does not include Digital Voice (DV) or Digital Data (DD)
WSPR	Above 30 MHz, WSPR frequencies in the band plan are the centre of the transmitted frequency (not the suppressed carrier frequency or the VFO dial setting).
Transmitter Setup and Linearity	Close attention should be given to power amplifier linearity to control the final transmitted bandwidth and avoid spectral regrowth affecting adjacent users. In particular this can be a major issue when operating digital modes. It is recommended that operators do not use more power than is necessary, and that care is taken to ensure sound cards, interfaces, and other equipment are properly set up so as to minimise the potential for interference.

CW QSOs are accepted across all bands, except within beacon segments (Recommendation DV05_C4_Rec_13)

Contest activity shall not take place on the 5, 10, 18 and 24MHz bands

Non-contesting radio amateurs are recommended to use the contest-free HF bands (30, 17 and 12m) during the largest international contests (DV05_C4_Rev_07)

The term "automatically controlled data stations" include Store and Forward stations.

Transmitting frequencies

The announced frequencies in the band plan are understood as "transmitted frequencies" (not those of the suppressed carrier!)

Centre of Activity (CoA)	A guide to where users of a particular mode or activity tend to operate. The bandplan does not give such users precedence over other modes or activities
---------------------------------	--

Unmanned transmitting stations

IARU member societies are requested to limit this activity on the HF bands. It is recommended that any unmanned transmitting stations on HF shall only be activated under operator control except for beacons agreed with the IARU Region 1 Beacon Coordinator, or specially licensed experimental stations.

472-479 kHz

Access is available to Full Licensees only

1.8MHz

Radio Amateurs in countries that have a SSB allocation ONLY below 1840kHz, may continue to use it, but the National Societies in those countries are requested to take all necessary steps with their licence administrations to adjust phone allocations in accordance with the Region 1 Band Plan (UBA - Davos 2005)

3.5MHz

Inter-Continental operations should be given priority in the segments 3500 - 3510kHz and 3775 - 3800kHz

Where no DX traffic is involved, the contest segments should not include 3500 - 3510kHz or 3775 - 3800kHz. Member societies will be permitted to set other (lower) limits for national contests (within these limits).

3510 - 3600kHz may be used for unmanned ARDF beacons (CW, A1A) (Recommendation DV05_C4_Rec_12)

5MHz

Access is available to Full Licensees only - see licence schedule for additional conditions

7MHz

The band segment 7040 - 7060kHz may be used for automatic controlled data stations (unattended) traffic in the areas of Africa south from the equator during local daylight hours.

Where no DX traffic is involved, the contest segment should not include 7,175 - 7,200kHz.

10MHz

SSB may be used during emergencies involving the immediate safety of life and property and only by stations actually involved in the handling of emergency traffic

The band segment 10120kHz to 10140kHz may be used for SSB transmissions in the area of Africa south of the equator during local daylight hours.

News bulletins on any mode should not be transmitted on the 10MHz band.

28MHz

Operators should not transmit on frequencies between 29.3 and 29.51MHz to avoid interference to amateur satellite downlinks

Experimentation with NBFM Packet Radio at 29MHz:

Preferred operating frequencies on each 10kHz from 29.210 to 29.290MHz inclusive should be used. A deviation of +/- 2.5kHz being used with 2.5kHz as maximum modulation frequency.

1.3GHz

The band is subject to re-planning. It is also shared with air traffic radar

2.3 GHz (2310-2350 and 2390-2400MHz)

Operation is subject to specific licence conditions and guidance - see also the Ofcom PSSR statement

3.4GHz (3400-3410 MHz)

Operation is subject to specific licence conditions and guidance - see also the Ofcom PSSR statement

Innovation Bands: 70.5-71.5 MHz, 146-147 MHz, 2300-2302 MHz and >275 GHz

Access to these bands requires an appropriate NoV, which is available to Full Licensees only

ITU-R Recommendation SM.328 (extract)

Necessary bandwidth: For a given class of emission, the width of the frequency band which is just sufficient to ensure the transmission of information at the rate and with the quality required under specified conditions.

The use of Amplitude Modulation (AM) is acceptable in the all modes segments but users are asked to consider adjacent channel activity when selecting operating frequencies.

Foundation and Intermediate Licence holders are advised to check their licences for the permitted power limits and conditions applicable to their class of licence.

RSGB Band Plan (effective from 1st January 2024)

The following band plan is largely based on that agreed at IARU Region 1 General Conferences with some local differences on frequencies above 430 MHz.

47 GHz (6mm)	UK Usage
IARU Recommendation	
47,000.000-47,200.000 MHz	47,088.2 MHz Centre of narrowband activity
