An amateur radio licence may be used for
A. advertising a retailer of amateur radio equipment
B. controlling a fleet of taxis
C.* testing propagation between two amateurs in different countries
D. providing radio communications for a commercial fairground operator

Which of the items listed below, is NOT a type of Amateur licence?
A. Intermediate
B. Foundation
C.* Beginner
D. Full

An amateur radio licence holder must, when changing the main station address, immediately notify
A. the local police
B. the local council
C. the RSGB
D.* Ofcom

A Foundation licence holder, operating under the supervision of a Full licence holder and using the Full licence holders callsign, must
A. operate subject to the restrictions of the Foundation licence.
B.* operate in accordance with the supervisor’s licence.
C. ensure that any contacts are recorded in the log.
D. reduce the transmitter’s power to 10 watts.

| 1C1          | 3            | Messages    | Section 1 – Licensing conditions and station identification | You are talking to M3ABC by amateur radio and friends enter his room. You may also address remarks to these friends.  
A. if they are family members  
B. if M3ABC gives permission  
C.* if they are also licenced radio amateurs  
D. but only on the calling channel | | | | | |
| 1C2          | 3            | Messages    | Section 1 – Licensing conditions and station identification | Which of the following may NOT be used in an amateur radio transmission?  
A. A message sent in Morse code  
B. A message sent containing Q codes.  
C.* A message using secret codes known only to the sender and recipient.  
D. A message containing data. | | | | | |
| 1C3          | 3            | Messages    | Section 1 – Licensing conditions and station identification | Which transmission is regarded as 'transmitting for general reception'?  
A. Being overheard by other amateurs you are not talking to.  
B. Talking to a group of more than six amateurs.  
C.* Talking to anybody who happens to be listening.  
D. Talking in a language other than English. | | | | | |
| 1D1          | 4            | Apparatus, inspection and closedown | Section 1 – Licensing conditions and station identification | When must you carry out tests on your station to ensure that it is not causing undue interference to other radio users?  
A. If you receive a complaint from a neighbour  
B.* From time to time  
C. Every week  
D. When the warranty expires on your transceiver | | | | | |
| 1D2          | 4            | Apparatus, inspection and closedown | Section 1 – Licensing conditions and station identification | Who may require a radio amateur to keep a log of transmissions to assist in identifying interference?  
A. The local police.  
B.* A person authorised by Ofcom.  
C. A person authorised by the RSGB.  
D. A county councillor. | | | | | |
| 1F1          | 4            | CEPT and international | Section 1 – Licensing conditions and station identification | A Foundation licence holder may operate in a foreign country if  
A. this is within the European Union.  
B. operating in that countries coastal waters  
C. the country recognises UK amateur radio licences  
D.* given permission by the appropriate authority of that country | | | | |

| 1G1 5       | Licence schedule | Section 1 – Licensing conditions and station identification | On which of the frequencies below may a Foundation licensee transmit? | A. * 1.825MHz  
B. 7.5MHz  
C. 15MHz  
D. 21.5MHz |
| 1G2 6       | Licence schedule | Section 1 – Licensing conditions and station identification | Which part of an amateur band is not permitted within 100km of Charing Cross, London? | A. 1.810-1.830MHz  
B. 51.00-52.00MHz  
C.* 431.0-432.0MHz  
D. 438.0-440.0MHz |
| 2A1 7       | Fundamental theory | Section 2 – Technical aspects | Which of the following is a good conductor of an electric current? | A. Rubber  
B. Plastic  
C. Glass  
D.* Aluminium |
| 2A2 7       | Fundamental theory | Section 2 – Technical aspects | In a circuit of resistors in series that are connected to a battery, the current flowing each resistor will  
A. be the same as the battery voltage.  
B. be different depending on the voltage of the battery.  
C. be different depending on the value of the resistor.  
D.* be same in each resistor. |
| 2B1 7       | Power | Section 2 – Technical aspects | A 12V mobile transceiver consumes 10W on receive and 100W on transmit. The highest current drawn will be | A. 0.83A  
B. 0.83Ω  
C.* 8.3A  
D. 8.3Ω |
| 2C1 7       | Resistance | Section 2 – Technical aspects | The correct formula relating the voltage, V, the current, I, and the resistance R is  
A. R = V - I  
B. R = V × I  
C. R = I / V  
D.* R = V / I |
The voltage across three resistors connected in series is 5 volts, 10 volts and 20 volts respectively. The total voltage across all three resistors is

A. 5 volts.
B. 10 volts.
C. 20 volts.
D. * 35 volts.

Which of the following will work normally when connected to a battery of the correct voltage regardless of battery polarity?

A. * Incandescent lamp
B. Radio receiver
C. LED lamp
D. Pocket Calculator

What is the significant difference between AC and DC?

A. Direct currents are always greater than alternating currents.
B. Direct currents take a long time to change direction.
C. * Alternating currents are continually changing direction.
D. Alternating currents have a fixed polarity

A frequency of 100 MHz has a wavelength of

A. * 3 metres.
B. 30 metres.
C. 0.3 metres.
D. 300 metres.

Digital signals are

A. constantly changing in amplitude, frequency or both.
B. * a stream of finite values at a specific sampling interval.
C. totally immune to interference.
D. created by a Digital to Analogue converter.

Radio waves
A. maintain their power as they propagate.
B. * normally travel in straight lines.
C. always pass through the ionosphere.
D. never pass through the ionosphere.

Propagation of VHF and UHF frequencies is normally
A. decreased with sporadic E
B. refracted back to earth by the troposphere.
C. * not much beyond the line of sight.
D. not possible beyond the ionosphere.

The lowest layer of the ionosphere is at a height of about
A. 800km
B. 700m
C. * 70km
D. 10km

HF propagation is NOT affected by the
A. sun.
B. time of day.
C. * day of the week.
D. frequency used.

VHF/UHF signals
A. are unaffected by buildings
B. * become weaker as they pass through buildings.
C. become stronger at higher frequencies
D. are unaffected by atmospheric conditions.

Snow, ice and rain have the most detrimental effect on which frequency range?
A. LF
B. HF
C. VHF
D. * UHF

Mock Questions

After fitting a transceiver in a vehicle, testing of the installation
A.* should be done with the vehicle stationary and all vehicle electrical systems running.
B. should be done with the vehicle moving on the road with all vehicle electrical systems running.
C. is not required.
D. is only required if specified by the vehicles insurers.

Which of the following is most likely to cause problems to an amateur radio receiver in a vehicle?
A.* Ignition Systems.
B. Headlights control.
C. Brake Lights.
D. Automatic gearbox.

Your neighbour comes to your door and complains that the interference he is getting on his TV is being caused by your radio transmissions. You should
A.* offer to carry out test transmissions with his co-operation to verify his allegation.
B. explain that it cannot be your radio transmissions as your equipment is ‘CE’ approved
C. advice him to contact Ofcom for advice
D. request that he comes to you with proof of his allegation.

A good reason for keeping a log of all transmission is because
A.* it will make it easier to check allegations of interference.
B. it is required by Ofcom.
C. it is a requirement of the amateur radio licence.
D. it will help support an application for planning permission for an antenna.

Information regarding EMC and interference is available from
A.* The RSGB.
B. The local authority.
C. Ofcom.
D. The BBC.

Before transmitting you should first listen on a frequency and then ask if the frequency is clear because
A.* the frequency may be in use but one of the stations may be in a location where you can receive their signal.
B. it is a requirement of the amateur radio licence.
C. this lets other amateur radio operators know that you are about to commence a QSO.
D. it is considered to be polite to commence all new QSO’s in this way.
Syllabus 2019. Sample Questions - Foundation Level

© 2019. The Radio Society of Great Britain

7A2 21 Good operating practices and procedures Section 7 – Operating practices and procedures

When calling "CQ, this is M7ABC calling CQ on 20 meters" you should
A. * repeat the sequence several times in quick succession over a period of 20 - 30 seconds, then listen for several seconds
B. call the sequence once and then listen for several seconds in between each
C. repeat the sequence several times in quick succession, moving the transmit frequency up a few kHz each time.
D. repeat the sequence several times in quick succession, moving the transmit frequency down a few kHz each time

Once you have contacted another station on a VHF FM calling channel you should
A. remain on the frequency until another station wishes to use it.
B. remain on the frequency as long as the contact takes.
C. ask if the frequency is clear.
D. * change frequency to a suitable clear channel.

7A3 21 Good operating practices and procedures Section 7 – Operating practices and procedures

The correct phonetic spelling of 'SIGNAL' is
A. SIERRA ITALY GOLF NOVEMBER APPLE LIMA
B. SIERRA ITALY GOLF NORWAY ALPHA LIMA
C. * SIERRA INDIA GOLF NOVEMBER ALPHA LIMA
D. SUGAR INDIA GOLF NOVEMBER ALPHA LIMA

7A4 21 Good operating practices and procedures Section 7 – Operating practices and procedures

If a log is recorded for obtaining a QSL or contest confirmation it should contain at least
A. * date, time (UTC), mode, callsign of station worked.
B. date, time (UTC), mode, radio model, antenna type
C. date, time (Local Time), mode, callsign of station worked.
D. date, time (Local Time), mode, radio model, antenna type

7A5 21 Good operating practices and procedures Section 7 – Operating practices and procedures

If hearing bad language or inappropriate behaviour on air you should
A. * ignore it without comment and do not refer to it on air.
B. ignore it and warn people on air on other frequencies to avoid it.
C. reprimand the person responsible over the air.
D. complain to the local council.

7A6 21 Good operating practices and procedures Section 7 – Operating practices and procedures

Band plans are used because
A. using them is a condition of the licence.
B. they help prevent on-air abuse.
C. * they enable efficient use of the band for different modes.
D. they are required for radio competitions

Why should two people be present during antenna erection?
A. * Because working at height is risky and someone may be needed to fetch help
B. Because there needs to be someone on the ground who can see what needs doing
C. Because it saves constantly going up and down the ladder to read the SWR meter
D. Because the person doing the work will often need a hand

Overreaching when on a ladder may cause
A. concern to passers by
B. * the person to fall off the ladder
C. a hard hat to give less protection
D. a poorly constructed or loose fitting job

The main purpose of wearing a tool belt when up a ladder is to
A. prevent the tools being damaged
B. provide a strong belt to tie to the ladder for safety
C. avoid having to repeatedly climb the ladder
D. * reduce the risk of dropping tools

What is the main health effect of exposure to electromagnetic radiation?
A. Ringing in the ears
B. Nervous stammer
C. Lost voice
D. * Heating of body tissue

The ICNIRP is of interest to amateurs because it
A. oversees the preparation of the International Radio Regulations
B. * produces guidance on the safe levels of RF exposure
C. co-ordinates the launch of amateur and other satellites
D. produces the International version of the Amateur Band Plans

The main risk when looking down waveguides is that
A. * microwave radiation could overheat your eye
B. waveguides have very sharp edges and can cut
C. you could be accidentally stabbed in the eye
D. dust and small particles could be blown into the eyes
